Committee for the Review of the Implementation of the Convention

Thirteenth session

Bonn, 25–27 March 2015

Item 2 (a) of the provisional agenda

Assessment of implementation of the Convention

Advocacy, awareness-raising and education

Assessment of the implementation of the Convention: Advocacy, awareness-raising and education

Note by the secretariat

Summary

This document contains the synthesis and preliminary analysis of information submitted by country Parties and other reporting entities for the reporting period 2012–2013 on operational objective 1 of the 10-year strategic plan and framework to enhance the implementation of the Convention (2008–2018): Advocacy, awareness-raising and education. It analyses the three relevant performance indicators from a global and regional perspective and identifies trends towards achieving the targets set for these indicators. More detailed statistical information at subregional level can be found in the annex.

The document offers some conclusions regarding the status of activities relating to advocacy, awareness-raising and education for consideration by the Committee for the Review of the Implementation of the Convention, together with recommendations regarding the need to adjust, streamline and strengthen measures aimed at achieving this objective.

Tables and figures relating to the performance indicators under operational objective 1		17

I. Introduction

1. This document is a synthesis and preliminary analysis of information submitted by Parties and observers on operational objective 1 (OO 1) of the 10-year strategic plan and framework to enhance the implementation of the Convention (2008–2018) (The Strategy): Advocacy, awareness-raising and education.¹
2. Chapters II, III, and IV below deal with the three performance indicators pertaining to this operational objective. The first section of each chapter discusses the state of affairs from a global perspective and links information submitted in 2014 with that submitted in 2010, thereby providing a trend analysis on the basis of the global target established for the relevant indicator.² The analysis is based on information provided by affected and developed country Parties (ACPs and DCPs).
3. General conclusions on the status of activities relating to OO 1 are presented at the end of this document. Some recommendations for consideration by the Committee for the Review of the Implementation of the Convention (CRIC) have been drawn up regarding the need to adjust, streamline and strengthen activities with a view to achievement of the objectives of The Strategy. The CRIC may wish to provide actionable guidance to Parties and other stakeholders on further steps to facilitate effective implementation of the Convention, as well as recommendations to the Convention's institutions on priorities to be included in their budget and programme of work for the following programming biennium, to be put before the Conference of the Parties (COP) for its consideration.

II. Performance indicator CONS-O-1: Number and size of information events organized on the subject of desertification, land degradation and drought and/or desertification, land degradation and drought synergies with climate change and biodiversity

4. The indicator measures the performance of Convention-related communication strategies, in particular whether desertification, land degradation and drought (DLDD) issues and/or DLDD synergies with climate change and biodiversity are being communicated and, if so, whether the communication is effective. Effectiveness is assessed through appraisal of media articles published or programmes broadcast regarding the information events. The assumption is that the stronger the media reach on DLDD issues and their synergies, the higher the probability of passing the message to the target audiences.

¹ See decision 3/COP.8, contained in document ICCD/COP(8)/16/Add.1.

² The trend analysis is based on a sample of reports that were submitted by Parties in both 2010 and 2014. The sample may vary for each indicator depending on whether or not a particular question was responded to by Parties. The trend therefore measures progress made against the baseline established using data submitted relating to the 2008–2009 biennium.

A. Global analysis

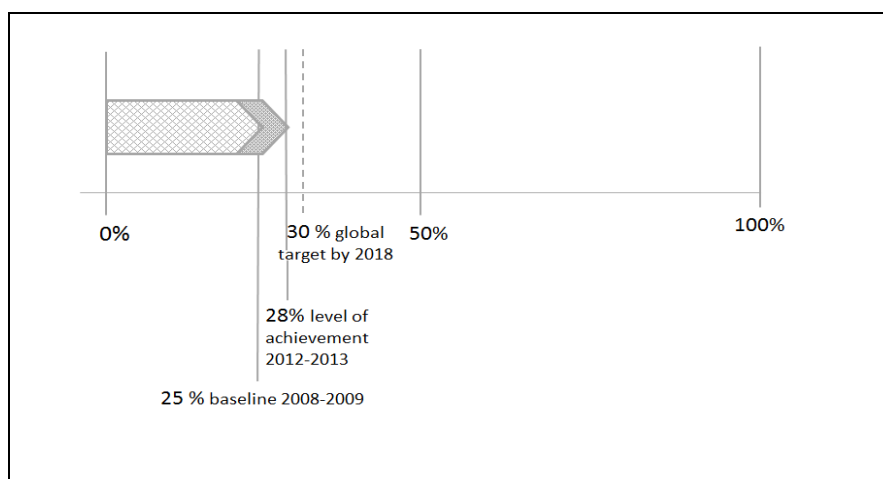

1. Level of achievement of the global target; trends and expectations³

5. A global target was set for this indicator of 30 per cent of the global population being informed by 2018 about DLDD and DLDD synergies with climate change and biodiversity.

6. In 2008–2009, the level of achievement of this indicator was 25 per cent (baseline).

Figure 1

Level of achievement of the global target

7. According to information provided by affected country Parties and developed country Parties in the 2014 reporting exercise, 28 per cent of the global population had been informed by the end of 2013 about DLDD and/or DLDD synergies with climate change and biodiversity. This marked an overall increase of 3 per cent against the 2010 baseline. Seven Parties reported that at least 70 per cent of their populations had been informed, accounting for 0.83 per cent of the global population.

8. In the affected country Parties, the population informed in 2013 represents 28 per cent of their total population. Although the reported percentage of the global population informed comes very close to the global target, in two regions, Northern Mediterranean

³ As in the previous reporting cycle in the case of CONS-O-1, the following three criteria were included in the analysis of the data collected: (a) number of events per year not exceeding 3,650 (ten per day); (b) average number of participants per event not exceeding 10,000; and (c) population attending information events within a year not exceeding 50 per cent. By applying those criteria, datasets of 41 countries were excluded from the analysis (23 per cent). Even though data were relatively consistent during reporting years in each reporting cycle, however additional inconsistencies were found between 2010 and 2014 reporting cycles which might be due to different methods applied. Hence, the data from 46 additional countries were excluded in the trend analysis calculations. A variation in other parameters relating to this indicator was also observed (number of mass media articles and radio/television programmes about the information event as reported). Similarly, the following criteria were applied (a) number of mass media per year not exceeding 3,650 (ten per day); (b) population reached by those media products within a year not exceeding 50 per cent. By applying those criteria, 55 countries were excluded from the analysis (31 per cent).

(NMED) and Central and Eastern Europe (CEE), and four subregions (three of them in Latin America and the Caribbean (LAC)), the percentage of the population informed is still below the target established for 2018.

9. According to information provided by developed country Parties, 37 per cent of their overall population had already been informed by the end of 2013. As only one third of the developed country Parties which reported in 2014 responded to this question, there is no clear evidence that the global target has been achieved in this group of countries.

2. Voluntary national targets

10. By decision 16/COP.11, affected country Parties are invited to provide information on voluntary national targets, consistent with the global target set by the COP, to enable progress in achieving the priorities established in the national action programme (NAP) to be measured. With regard to CONS-O-1, affected country Parties were asked to indicate what percentage of their national populations they aimed to inform, and by what year.

11. One hundred and nineteen⁴ affected country Parties answered the question relating to percentage of national population informed about DLDD and/or DLDD synergies with climate change and biodiversity if set as a voluntary national target. Comparison of the reported national voluntary targets with the global target reveals that 46 countries have set a lower target than the global one.

12. Twenty-five out of 119 affected country Parties (or 21 per cent) have already achieved their target; in 17 cases, however, the target was lower than the global one.

13. These results indicate that the global target of 30 per cent of a population being informed about DLDD might be difficult to achieve by 2018 despite the percentage reached in 2014 (28.1 per cent of the global population informed).

3. Information events and their impact on the media

14. In the reporting period (2012–2013), the number of events in affected country Parties increased by 22 per cent and the number of participants attending these events increased by 15 per cent. The increase in both number of events and number of participants is recorded in all affected regions. It is worth noting that the effectiveness of these events and their impact on the media have also consistently increased.⁵

15. On average, there were 56 events per day in more than 120 countries around the world.

16. More than half of the developed country Parties that submitted their reports answered questions relating to the number of information events and the number of participants. For developed country Parties, both the number of information events and the number of participants increased equally by 9 per cent. However, there was a decrease of 39 per cent in media products in the biennium 2012–2013, as well as in the number of people reached (80 per cent).

4. National communication strategies

17. One hundred and seventy four affected country Parties and developed country Parties answered the question relating to the national communication strategy. Only 37 per

⁴ Or 76 per cent.

⁵ The number of media products also increased by 12 per cent and the populations informed about DLDD issues via these media increased by 33 per cent.

cent⁶ of these have a national communication strategy in place. It appears that the relatively good global results in terms of information events, their impact on the media and the public, and the overall global awareness of DLDD have been achieved without a specific communication strategy.⁷ A specific analysis at country level would be needed to assess the effectiveness of national communication strategies.

5. Support to information activities

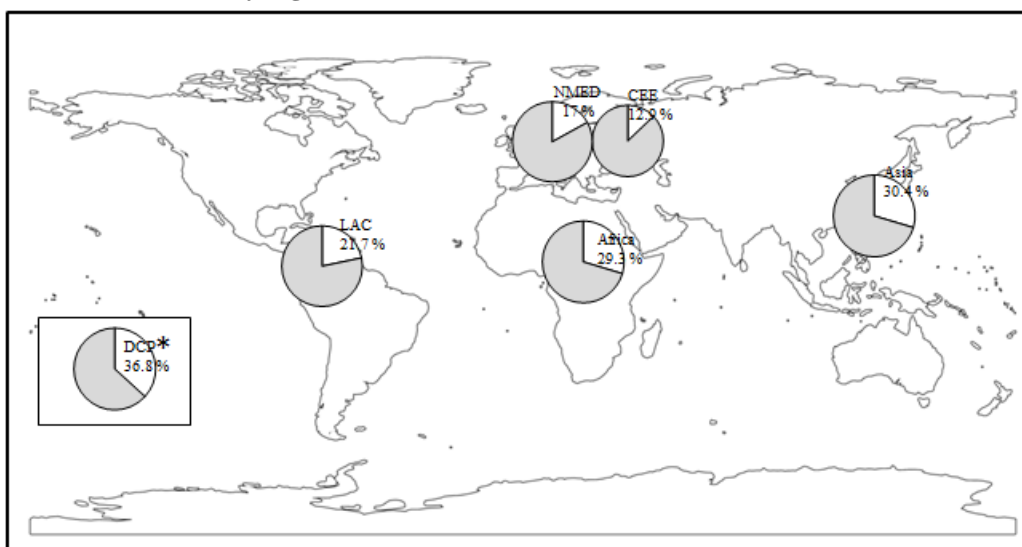

18. The Global Environment Facility (GEF) reported that the number of information events organized is difficult to track since information events are organized during the implementation of the projects by the implementing/executing agencies. As stated, however, the GEF secretariat took part in two national and another two regional events during this reporting cycle, in addition to one global event in 2013.

19. The United Nations Environment Programme (UNEP) organized two events in 2013, World Environment Day and the International Day for Biological Diversity, where DLDD matters were addressed, together with 15 media products informing people about those events. It is estimated that 10 million people were reached.

20. In 2012, the United Nations Development Programme (UNDP) organized three events in which 250 people participated. In 2013, these numbers increased to 11 events and 450 participants. Three media products were produced in 2013, reaching approximately a thousand people.

B. Regional analysis

Figure 2
Level of achievement by region

* As only one third of developed country Parties which reported in 2014 responded to this question, there is no clear evidence that the global target has been achieved in this group of countries.

⁶ 65 countries.

⁷ 109 affected country Parties and 18 developed country Parties reported not working towards raising awareness of DLDD through a specific national communication strategy on environmental issues.

21. Even though the target is set at the global level, it may also be considered as an indicative threshold at regional, subregional and national levels.⁸ Given the size of the sample, however, the trend analyses should be considered with caution, particularly at subregional level; while the status assessment is based on data reported in 2014, the trend analysis took into consideration only data from those Parties that provided relevant information in the 2010 and 2014 reporting cycles.

1. Africa

22. Although Africa is close to reaching the target (29.3 per cent), this increase is mainly related to the reported percentages in Western Africa (47.5 per cent) where two Parties reported remarkably high numbers (over 70 per cent). In the other four subregions, the target has not been achieved. The lowest percentage of population informed about DLDD and/or synergies with climate change and biodiversity can be observed in Eastern Africa (12.9 per cent). However, in Eastern Africa the highest increasing trend can be observed. Central Africa is the only subregion where a decreasing trend was revealed.

2. Asia

23. Although Asia maintains the target achieved at a level of 30.4 per cent, three out of six subregions (Central Asia, South Asia and West Asia) have a proportion of the population informed about DLDD and/or synergies with climate change and biodiversity of below 30 per cent (26.1, 28.8 and 22.6 respectively), and the trend in these subregions is for a decreasing informed population. The situation in the Pacific region (32.4 per cent) should be regarded with caution since two Parties reported a high percentage of their populations being informed.

3. Latin America and the Caribbean

24. In LAC, 21.7 per cent of the population is informed regarding DLDD; this is mainly due to the situation in Mesoamerica (38.4 per cent). Despite the positive regional trend (the highest increment observed globally – plus 18 per cent), there are two subregions that are far from reaching the target (Andean 4.6 per cent and the Caribbean 12.6 per cent). Andean is the only subregion where a decreasing trend can be observed.

4. Northern Mediterranean

25. Seventeen per cent of the population of this region is informed, and a growth of 5 per cent has been reported.

5. Central and Eastern Europe

26. In CEE, almost thirteen per cent of the population of the region is informed, showing an increase of 6 per cent as compared to the last reporting cycle.

⁸ As in the previous reporting and review exercises, relevant data on populations were drawn from publications of the United Nations Department of Economic and Social Affairs, Statistics Division (<<http://unstats.un.org/unsd/demographic/products/vitstats/serATab2.pdf>>).

III. Performance indicator CONS-O-3: Number of civil society organizations and science and technology institutions participating in the Convention processes

27. The indicator measures the level of participation of civil society organizations (CSOs) and science and technology institutions (STIs) in DLDD-related programmes and projects. The indicator and its global target investigate whether the active involvement of these stakeholders in DLDD-related initiatives increases over time. Reporting entities can complement this information by reporting whether or not they are undertaking initiatives in order to increase the participation of CSOs and STIs in the Convention process.

A. Global analysis

1. Level of achievement of the global target; trends and expectations⁹

28. A global target was set for this indicator, namely that a steady growth in the participation of CSOs and STIs in the Convention processes should be recorded during the implementation of The Strategy.

29. Globally and for this reporting period, there are more than 23,500 CSOs and more than 4,100 STIs involved in DLDD-related activities in affected country Parties and developed country Parties, with an increase in the number of both CSOs and STIs involved in the reporting period (8 and 9 per cent respectively).

30. In four regions (excluding NMED) as well as in developed country Parties the number of CSOs involved in DLDD-related projects and programmes is approximately five times higher than the number of STIs involved.

31. Between 2012 and 2013, it was noted that in developed country Parties the number of CSOs involved in DLDD-related programmes and projects increased by 7.9 per cent¹⁰ and the number of STIs increased by 5.6 per cent.¹¹

32. The GEF reported a sharp decrease in both CSOs and STIs involved in DLDD-related programmes/projects supported by the GEF (by 70 and 80 per cent, respectively) between 2012 and 2013.

33. In addition, the UNDP reported a sharp decrease in the number of CSOs involved in DLDD-related programmes/projects; there is, however, an increase in the number of STIs. Despite the fact that UNEP is undertaking concrete initiatives to increase the participation of CSOs and STIs, it reported only one STI involved in 2013 and no involvement of CSOs at all.

34. When looking at the data submitted in 2010 and 2014, the trend in CSO and STI participation has been positive; from 2008 the numbers of both CSOs and of STIs involved in implementation of the Convention increased by an average of 23 per cent per biennium.

⁹ In the case of CONS-O-3 and CONS-O-4 there were no major data quality issues. One country reported high figures under CONS-O-3 (more than 35 times higher than the average) and one provided inconsistent numbers over the reporting years. Four reported high figures under CONS-O-4 (100 times higher than the average). Subsequently, these numbers were excluded from the analysis.

¹⁰ From 331 to 357.

¹¹ From 234 to 247.

Figure 3
Increase in number of civil society organizations and science and technology institutions participating in the Convention process from 2008 to 2013

2. National voluntary targets

35. One hundred and twelve affected country Parties (or 70.4 per cent) decided to establish such a target. According to the national targets, if country Parties continue to implement and fulfil their plans, a steady growth in CSO and STI involvement is also likely to be observed at individual country level.

3. Initiatives to increase participations of CSOs and STIs

36. During this reporting exercise, the large majority (87 per cent) of the affected country Parties reported that their governments undertook concrete initiatives to increase the participation of CSOs and STIs in the Convention processes.

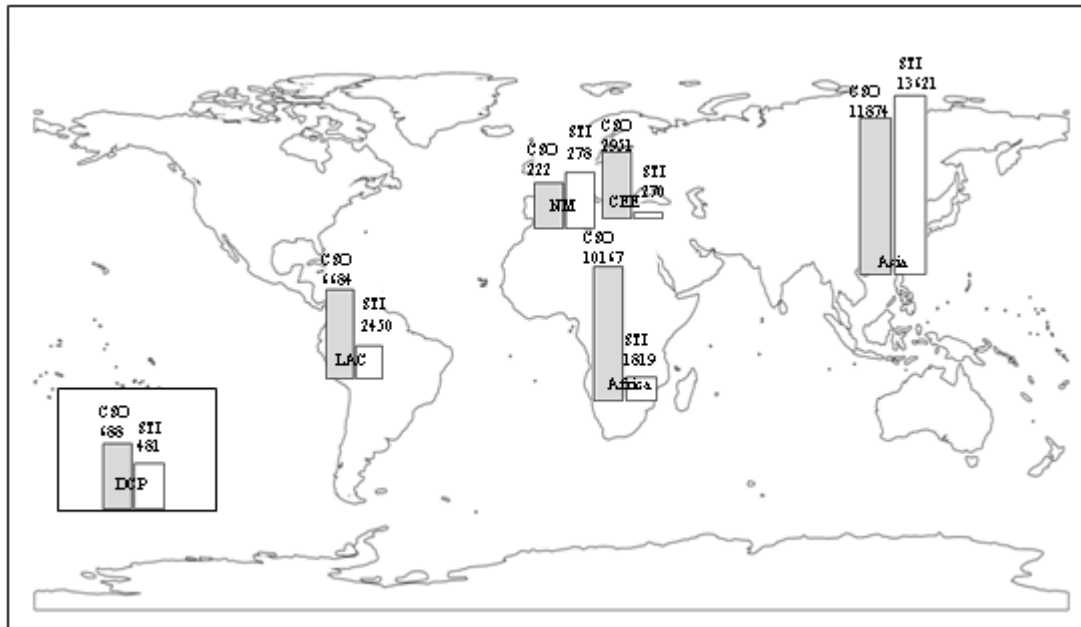

37. More than half (52 per cent)¹² of the developed country Parties which responded to this question¹³ undertook such initiatives. An increasing trend of 33 per cent in undertaking such initiatives can be observed as compared to the 2010 reporting cycle.

¹² 12 countries.

¹³ 74 per cent of developed country Parties responded to this question.

B. Regional analysis

Figure 4
Number of civil society organizations and science and technology institutions involved in the Convention process, by region

1. Africa

38. More than 4,600 CSOs and 850 STIs were involved in DLDD-related programmes and projects in 2012. There was an increase in CSO and STI participation between 2012 and 2013 (19.1 and 12 per cent, respectively).

39. Almost 50 per cent of the total CSOs are involved in Northern Africa, while almost one third of the STIs are involved in Western Africa. Fifteen per cent of countries reported a higher involvement of STIs than CSOs.

2. Asia

40. While the number of STIs increased by 3.1 per cent, the number of CSOs increased by 16.2 per cent between 2012 and 2013. One country reported data out of range. The number of both CSOs and STIs grew in all subregions over the reporting years. In eight countries, more STIs than CSOs are involved in DLDD. One country reported no involvement of CSOs; four countries reported no involvement of STIs. Considering the trend between the 2010 and 2014 reporting cycles, a growth in the number of CSOs can be observed at the regional level. A total increase of 378 per cent can be observed. Furthermore, there has also been an increasing trend of 49 per cent in the number of STIs since 2008.

3. Latin America and the Caribbean

41. An increase of 32.8 per cent in CSO involvement is recorded from 2012 to 2013.¹⁴ The number of STIs involved increased by almost 15 per cent.¹⁵ A growth in numbers of both CSOs and STIs can be perceived at the regional level (an increase of 156 and 260 per cent respectively).

4. Northern Mediterranean

42. NMED is the only region where more STIs than CSOs are involved in DLDD-related programmes and projects. Two countries reported a higher involvement of CSOs than STIs, and two countries reported no involvement of CSOs. The numbers of stakeholders involved, however, increased by 7.5 per cent over the reporting cycle for CSOs and by 17.2 per cent for STIs. Comparing the two reporting cycles concerned, the number of CSOs increased by 24 per cent, while the number of STIs decreased by 2 per cent.

5. Central and Eastern Europe

43. While the number of CSOs involved in DLDD-related programmes and projects in this region remained almost constant,¹⁶ the number of STIs involved increased by 3 per cent. One country reported no involvement of CSOs; another country's data were not consistent over the reporting years. A positive trend of 8 per cent can be measured in the number of CSOs. The number of STIs, however, decreased by 19 per cent.

IV. Performance indicator CONS-O-4: Number and type of initiatives relating to desertification, land degradation and drought undertaken by civil society organizations and science and technology institutions in the field of education

44. The indicator measures the number of DLDD-related initiatives undertaken by CSOs and STIs in the education sector. The assumption is that the higher the number of DLDD-related education initiatives undertaken by these stakeholders, the higher would be the national capacity to address DLDD in the medium and long term.

A. Global analysis

1. Level of achievement of the global target, and trends and expectations

45. A global target was set for this indicator, namely a steady growth in the number of DLDD-related education initiatives undertaken by CSOs and STIs recorded throughout the implementation of The Strategy.

46. In 2013, more than 7,000 DLDD-related education initiatives were carried out by CSOs and more than 3,400 initiatives by STIs. Over the reporting years, the number of CSO and STI initiatives increased by 19 and 22 per cent respectively.

¹⁴ From 2,871 in 2012 to 3,813 in 2013.

¹⁵ From 1,140 in 2012 to 1,310 in 2013.

¹⁶ 1,476 in 2012 and 1,475 in 2013.

47. Compared to the previous indicator, the role of STIs is predominant in the field of education.¹⁷

48. A growth of almost 88 per cent in the number of CSOs can be observed since 2008, indicating a significant contribution to achievement of the target.

49. In 2012, the UNDP supported 780 DLDD-related initiatives implemented by CSOs. In 2013, there were 42 such initiatives and an additional five initiatives implemented by STIs.

Figure 5

Increase in number of civil society organizations and science and technology institutions initiatives in the field of education

2. Voluntary national targets

50. Sixty-two per cent of affected country Parties¹⁸ answered the question relating to the percentage increase in the number of DLDD-related education initiatives, set as a voluntary national target. There is a wide variation in the responses provided by countries, which means that needs are perceived differently by different countries.

a. Initiatives to increase the number of initiatives implemented by civil society organizations and science and technology institutions in the education sector

51. Ninety-five per cent of the countries that submitted the report answered the question relating to increasing the delivery of DLDD-related initiatives by CSOs and STIs in the education sector. An overall view shows that 142 countries answered positively while 29 responded negatively. In the case of the developed country Parties there were more negative responses than positive ones, despite the fact that there is an average of 11 DLDD-related education initiatives per country per year.

¹⁷ While the global ratio between CSOs and STIs is 5:1 for participation in the Convention processes, the ratio for education initiatives is 2:1.

¹⁸ 99 countries.

52. Almost 86 per cent of affected country Parties stated that their governments were undertaking initiatives to increase the number of DLDD-related initiatives in the education sector implemented by CSOs and STIs, while 14 per cent were not. This proves that affected country Parties are giving much importance to activities relating to DLDD in the education sector.

53. Despite an increase in the number of CSO/STI initiatives between 2012 and 2013, thirteen developed country Parties (52 per cent) reported that their governments are not taking concrete initiatives to increase the delivery by CSOs and STIs of DLDD-related initiatives in the education sector. The situation remains constant over two reporting cycles.

b. Initiatives undertaken by developed country Parties and other entities

54. The number of DLDD-related initiatives that developed country Parties undertook to increase the activities of CSOs and STIs in the field of education increased by 12¹⁹ and 14²⁰ per cent respectively in this reporting period. Five of the countries that provided an answer to this question (29 per cent) reported no initiatives undertaken by CSOs, while another five reported no initiatives undertaken by STIs in the field of education.

55. Over the two reporting cycles (2010 and 2014), a decrease in initiatives was observed in developed country Parties for both CSO and STI activities in the field of education (49.2 per cent and 47 per cent respectively).

56. The GEF responded affirmatively to the question relating to support initiatives to increase the number of DLDD-related initiatives in the education sector implemented by CSOs and STIs.

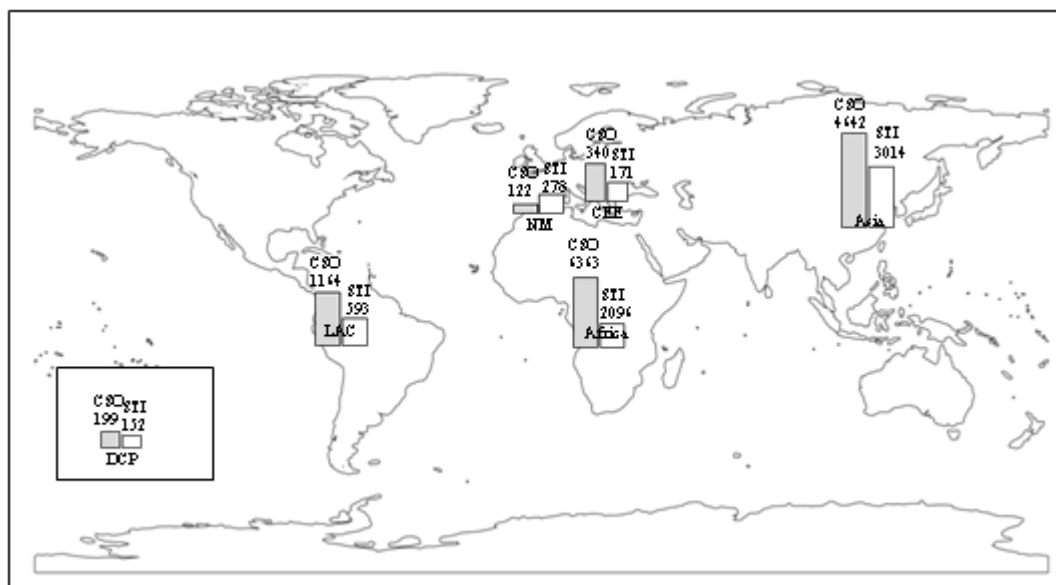

57. Neither UNEP nor UNDP provided answers to the question as to whether their organization undertakes concrete initiatives to increase the number of DLDD-related initiatives in the education sector implemented by CSOs and STIs.

¹⁹ From 94 in 2012 to 105 in 2013.

²⁰ From 71 in 2012 to 81 in 2013.

B. Regional analysis

Figure 6
Number of DLDD-related initiatives by civil society organizations and science and technology institutions in the field of education, by region

1. Africa

58. Africa accounts for 51 per cent of all DLDD-related initiatives undertaken by CSOs in 2013 and for almost 34 per cent of initiatives undertaken by STIs in that year. The number of CSO and STI initiatives increased over the reporting period by almost 26 per cent for CSOs (from 2,815 in 2012 to 3,548 in 2013) and by 25.6 per cent for STIs (from 929 in 2012 to 1,167 in 2013).

59. An increasing trend in the number of CSO initiatives has been observed in Africa since 2008 (the number has more than tripled).

2. Asia

60. In Asia, the number of initiatives undertaken by CSOs in 2012 in the field of education increased by 12.1 per cent (from 2,189 in 2012 to 2,453 in 2013). Despite the fact that the situation in South Asia remained constant over the reporting years, it had the highest number of CSO initiatives, accounting for 49 per cent of the total in Asia in 2013.

61. A growth of 51.1 per cent in the number of CSO initiatives has been observed between the two reporting cycles, indicating an increasing trend. In contrast, the number of STI initiatives has declined by almost 42 per cent.

3. Latin America and the Caribbean

62. In LAC, the number of CSO and STI initiatives increased by 15.6 and 14.9 per cent respectively.

4. Northern Mediterranean

63. In NMED, many more activities are carried out by STIs (154 in 2012) than by CSOs (57 in 2012). A high increase in CSO initiatives is due to one country. There are three

countries with no CSO initiatives in the field of education. In one country, no initiatives at all were undertaken by CSOs. Three countries accounted for 80 per cent of all activities undertaken by STIs in 2013 in the region. Another three accounted for 79 per cent of all activities undertaken by CSOs in 2013.

64. Comparing the 2010 and 2014 reporting cycles the number of CSO initiatives increased by 173 per cent, while the number of STI initiatives decreased by ten per cent.

5. Central and Eastern Europe

65. The national reports from the CEE region show a decrease of 4.6 per cent in the initiatives in the field of education undertaken by CSOs (from 174 in 2012 to 166 in 2013). The number of STI initiatives remained almost constant (85 and 86 respectively). One country accounts for 59 per cent of CSO initiatives in both reporting years.

66. While there is a decreasing trend in the number of CSO initiatives over the reporting years concerned, the number of STI initiatives increased by 66.7 per cent.

67. The GEF reported two initiatives in the field of education implemented by CSOs in 2012, together with one initiative in the field of education implemented by an STI in 2012 and one of each in 2013.

V. Conclusions

68. Based on information provided by Parties, it is possible to draw a reasonably optimistic picture concerning the outcomes of OO 1: Advocacy, awareness-raising and education.

69. With regard to the overall population aware of DLDD and/or synergies with climate change and biodiversity, an increase of 3 per cent has been recorded from the baseline, reaching in 2013 a level already very close to the global target set by The Strategy. Should the trend observed in the last three reporting exercises continue, the global target would definitely be achieved.

70. The remarkable number of information events – on average, 56 events per day were organized in more than 120 countries during the reporting period – and their impact on the media may have contributed to this major achievement.

71. Civil society and the scientific community are increasingly involved in the Convention process, including in education activities, although in different ways according to their specific mandates. For the two indicators relevant to CSOs and STIs, the targets set by The Strategy are not expressed in absolute figures but refer to trends over the period of The Strategy: for both entities, an increasing trend in the numbers of both CSOs and STIs has been recorded since 2008. If the positive trend continues, it can be concluded that the target will be achieved. The likelihood of observing a similar trend in the future is confirmed by the fact that the great majority of governments are undertaking concrete steps to increase the number of these key stakeholders involved in DLDD-related activities.

72. It is worth noting that a large majority of affected country Parties have set voluntary national targets for these indicators, which are different from the global targets identified by the COP but still consistent with them. Since these targets reflect the priorities established in the NAP, it can be concluded that – by establishing such voluntary national targets – Parties are now in a position to monitor progress in the implementation of the NAPs at both the global and the national levels. Future

reporting exercises and reviews of implementation undertaken by the CRIC can build on this important new asset in the process.

VI. Recommendations

73. The following are preliminary recommendations which may be considered by Parties at the thirteenth session of the CRIC, with a view to initiating early consultations on draft decisions to be forwarded to the COP at its twelfth session for consideration:

(a) Those country Parties which reported a percentage of national awareness of DLDD and its synergies lower than their national targets are invited to step up their efforts in communication and education in order to meet their targets;

(b) Parties are invited to assess and increase, where needed, the effectiveness of their means of communication on DLDD-related issues, with a view to reaching a wider audience;

(c) Affected country Parties are invited to continue monitoring the implementation of their NAPs with regard to policy, measures and actions undertaken in the fields of advocacy, awareness-raising and education;

(d) The Convention's institutions shall include, in their respective 2016–2017 work programmes, specific actions in support of enabling affected country Parties to raise awareness of DLDD, targeting those countries, subregions and regions which reported that they lacked relevant capacities and instruments in this regard.
